### Java

```java
class Solution {
  public int[] findRightInterval(int[][] intervals) {

  }
}
```

---

### JavaScript

```javascript
/**
 * @param {number[][]} intervals
 * @return {number[]}
 */
var findRightInterval = function(intervals) {

};
```

---

### TypeScript

```typescript
function findRightInterval(intervals: number[][]): number[] {

};
```

---

### C++

```cpp
class Solution {
public:
```

```
  vector<int> findRightInterval(vector<vector<int>>& intervals) {

  }
};
```

---

**C#**

```
public class Solution {
  public int[] FindRightInterval(int[][] intervals) {

  }
}
```

---

**Kotlin**

```
class Solution {
  fun findRightInterval(intervals: Array<IntArray>): IntArray {

  }
}
```

---

**Go**

```
func findRightInterval(intervals [][]int) []int {

}
```

---
